ERODORO

BUILT ON BASE

RIPS

Buy a stock's upside for $1.

Rip a blind pack, pull a real upside position on NVDA, TSLA, AAPL and seven more stocks.

erodoro.xyz · Colosseum · Base · [event / date]

THE PROBLEM

$1 buys a sliver of a share. It doesn't buy the move.

Fractions are flat

When NVDA jumps 10%, a $1 slice of it earns 10 cents. Small accounts never feel the move.

Options are gated

Upside exposure exists as call options, behind broker approvals, 100-share contracts and a wall of jargon.

Holders sit on idle upside

People holding tokenized stock have no simple onchain place to sell their upside in small pieces.

THE HABIT ALREADY EXISTS

People already rip packs onchain. And stocks are already onchain.

$344M

onchain gacha pack spending in June 2026, up from about $50M a year earlier

$3B+

onchain volume of xStocks tokenized equities by January 2026

THE IDEA

We sell the upside, *not the stock.*

$1, one tap

A blind pack pulls a real upside position on one of 10 stocks.

Supplied by holders

Stock holders lock and list their upside and get paid on every rip.

Clear end date

30-day batches, settled by price oracle. Above the strike pays out.

HOW IT WORKS

Two sides, one pool, one oracle.

01 · SELLERS

Lock and list

Lock a stock, keep its base value, list the upside above the strike at your own price. Every rip of your listing pays you directly.

02 · BUYERS

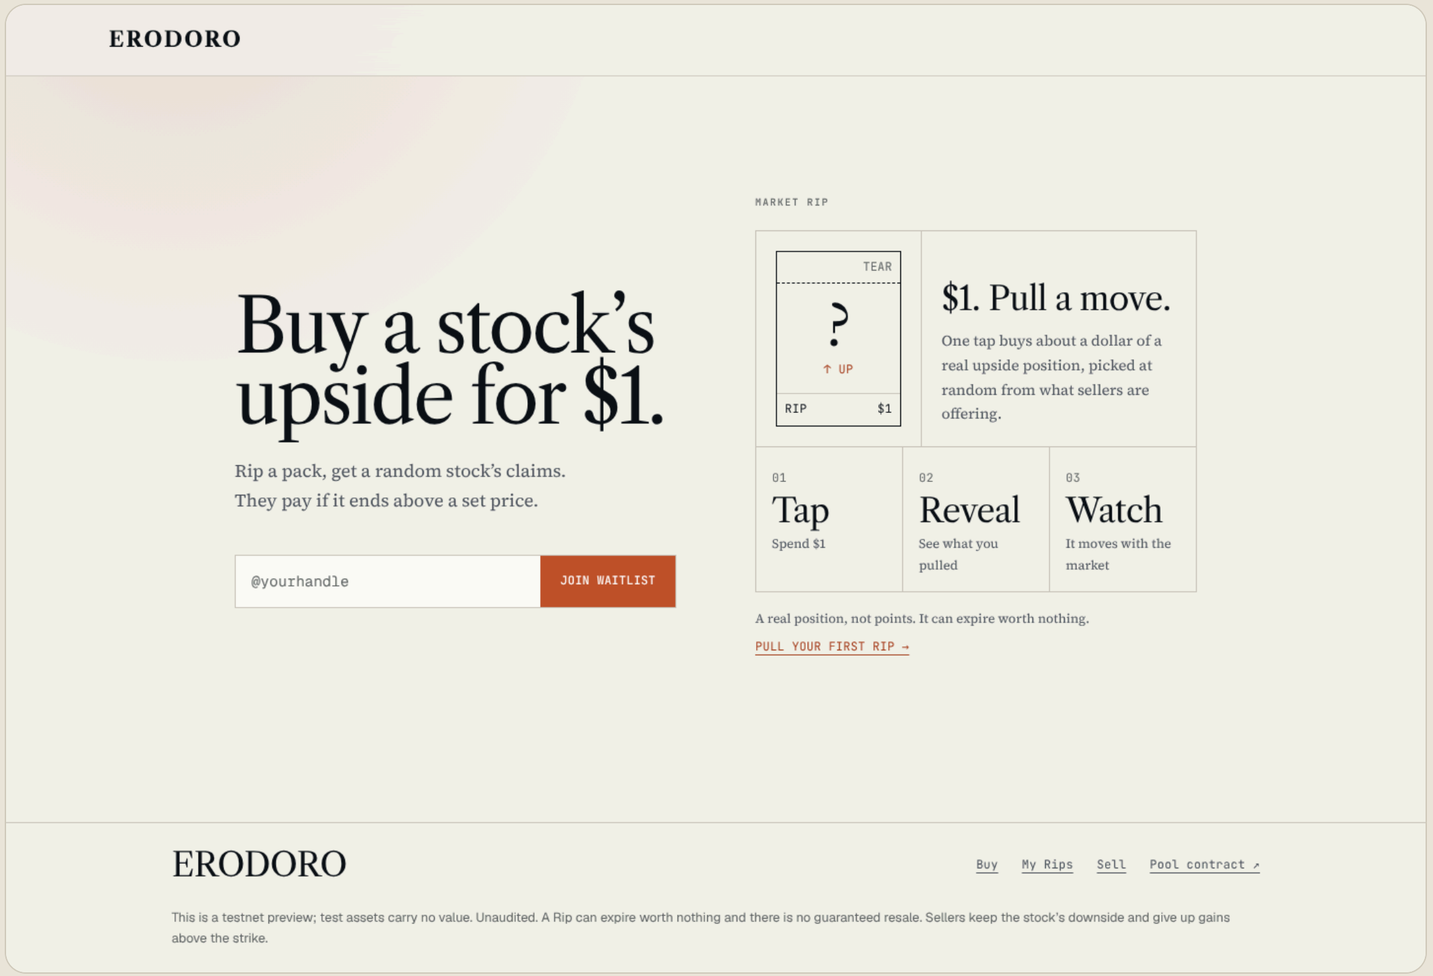

Rip $1

One tap picks a position at random across 10 stocks: NVDA, AAPL, MSFT, AMZN, GOOGL, META, TSLA, SNDK, MSTR, SPCX.

03 · SETTLE

30 days later

The oracle settles each market. Above the strike, buyers redeem. Below, the rip expires and sellers keep their stock.

INTRODUCING

Erodoro Rips

Tap, reveal, watch. Live today on Base Sepolia.

WHY NOW

A $1 stock product only works now.

Stocks are onchain

Coinbase tokenized stocks with Chainlink feeds on Base; xStocks on Solana.

Fees are cents

On Base and Solana a $1 purchase is not eaten by gas.

Pack ripping is a habit

Onchain gacha grew about 6x in a year.

Wallets got easy

Smart wallets and sponsored gas let a first-timer rip without setup.

WHERE WE ARE

Live on Base Sepolia today.

10	[__]	[__]	[__]
stock markets per batch	rips pulled	distinct buyers	waitlist sign-ups

Shipped

$1 blind rips, seller lock-and-list, My Rips with live balances, oracle settlement and redemption, Chainlink reference prices.

Fixing before mainnet

Pick uses block data a builder could bias; house quotes refresh by hand; unaudited, test assets only.

ROADMAP

Testnet to Base mainnet, then Solana.

Q4 2026

Fair and automatic

Verifiable randomness (Pyth Entropy or Chainlink VRF). Automated quote refresh. Security audit.

Q1 2027

Base mainnet

Capped launch on real tokenized stocks. Smart-wallet sign-up, gas-free first rip.

Q2 2027

Solana + social

Rips on Solana with xStocks. Shareable pulls, leaderboards, themed packs.

Q3 2027

Open supply

Third-party market makers, seller dashboard, more stocks and ETFs.

Draft dates · [confirm]

TEAM

Why us

[One line on what you've built or shipped before.]

Built Rips first on Solana, then shipped it on Base with new contracts, purchase protections and seller listings.

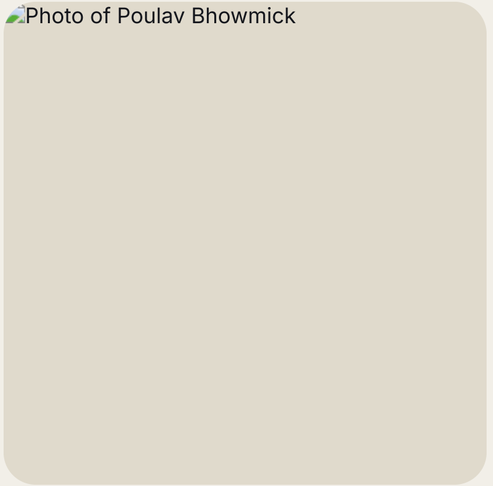

Existing experience and code adapted from the Solana project; existing Base protocol/scaffolding reused; new Base integration and purchase protections authored for this port.
